

IRMD22141SS

High Current Gate Driver Reference design

High Current Gate Driver for AC Induction or Brushless Motors
Integrated desaturation detection circuit with active bias
1200V DC-Bus Capability up to 50A
Using IR22141SS

Compatible with standard ECONO2-6PACK IGBT module (Not included in design kit)

Design kit includes-

- Assembled and Tested demo board
- User Guide
- Schematic
- Bill of Materials
- Circuit Board Layout
- Datasheet
- CD including gerber files and documentation
